

With Regulation 1907/2006/EC of the European Parliament and Council from the 18th of December 2006, REACH entered into force on June 1st 2007. We offer you tailored Services to benefit from the implementation of REACH.

Your easy way into the EU-market Only Representative for Articles

With the implementation of REACH, the legal framework for conducting business in the EU will change for Non-EU manufacturers and trading companies of certain articles and products.

The requirements in REACH obliges registration of a substance that is intentionally released from articles (i.e. ink from cartridges, aerosols, tires) and is present in those articles in one tonne or more. Additionally, if a substance of very high concern (PBT, CMR) and being identified for authorization is contained in an article above 0.1 %, then a notification is required unless exposure from that substance can be excluded. The Agency can decide whether or

not to require a registration for notified substances.

If a registration is required, a representation in the European Union is obligatory.

The most efficient and less costly way is to be represented by an Only Representative, as laid down under Article 8 of REACH.

Chemservice fulfills the specific requirements to make sure the authorities can communicate with a person with profound knowledge in the practical handling of your registration or notification.

The Representative would have the legal responsibility to comply with all relevant obligations under REACH.

Chemservice is your loyal partner and guarantees confi-

dentiality. We carry out all negotiations and contacts with authorities and the supply chain and undertake the best efforts to achieve REACH compliance in the most economic way.

OUR SERVICES:

- ✓ Only Representative
- ✓ Portfolio and data examination
- ✓ Development of efficient testing strategies
- ✓ Preparation of Technical Dossiers and Chemical Safety Assessments
- ✓ Client representation in consortia and at authorities
- ✓ Data Brokering
